

NMT's New VI Alpha Tag

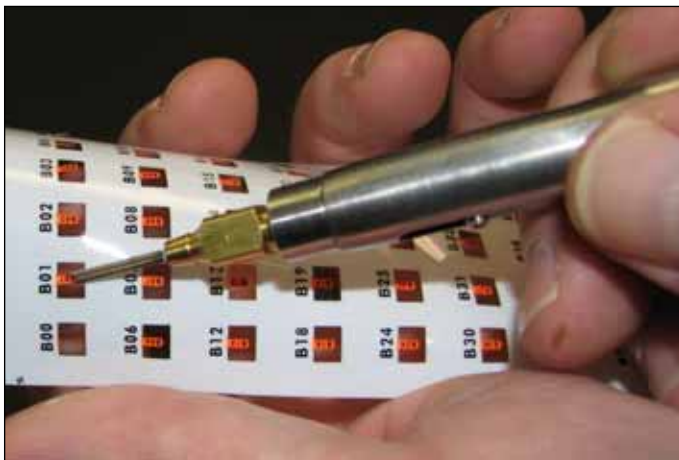

Northwest Marine Technology is pleased to announce that we have completely redesigned our Visible Implant Alpha Tag for 2010! The new tags will be available in January.

Our new VI Alpha Tags are:

- easy to load and inject;
- less expensive;
- stable for long-term storage; and
- backed by our one year guarantee and expert customer service.

The new tags are available in one size (1.2 mm x 2.7 mm) with black letters on a fluorescent red, orange, yellow or green background. Each color will have 2500 different alphanumeric codes.

NMT's new VI Alpha tags are easy to load. Slide the tag into the needle, and snap it off.

In all of our testing, the retention and readability of the new VI Alpha Tags was at least as high as the soft VI Alpha Tags, and all testers were delighted with the ease of using the new tags.

We also redesigned the VI Alpha Injector for 2010. The new needle is much sharper and can be inexpensively replaced. Existing injectors can be retrofitted with the new needle to accommodate the new tags.

For more information, or to place an order for the new VI Alpha Tags. Please contact our Biology staff (biology@nmt.us; 360-596-9400).

For a limited time, custom orders of the soft VI Alpha Tags will be available for continuing projects. Please contact NMT Biology (biology@nmt.us; 360-596-9400) for availability and pricing.
